## WHY LED LIGHTS?

**CHEAPER TO OPERATE** - LED Lights might cost more up front, but they provide larger savings over time. LED's last 5 times longer than HID and Halogen lights.

**SAFER TO USE** - LED Lights are more powerful than a traditional Halogen light, a brighter light provides longer distances drivers can see. The white color of LED lights and overall coverage of the light can also help reduce operator fatigue.

**EASIER ON EQUIPMENT** - Since LED's use less energy, this puts a lot less strain on the equipment's electrical system.

**EASY TO INSTALL** - Our lights are designed to be a direct replacement, "Plug & Play". They come with factory style brackets, connectors, and mounting points.

## LUMENS

There are two common terms in the LED Light industry that relate to Lumens: Raw Lumens and Effective Lumens. Raw Lumens are measured when the lights first turn on. At this point the LED's are cold and have maximum output. After running, the lights get hot, and use the heatsink to stay cool. Effective Lumens are measured when the LED's are at a constant operating temperature.

## COLOR TEMPERATURE

Color temperature is a characteristic of visible light, measured in units of absolute temperature on the Kelvin Scale (K). Lower temperature is described more as a warmer color, for example candlelight is around 1,900K. A Halogen light is a warm light with a temperature around 3,000K.

High temperature is described more as a cooler color, daylight is around 6,000K. The LED's Tiger Lights use have a temperature range of around 5,500-6,000K, which projects a clear white light. The LED's that Granite Lights use have a temperature range of around 5,000K, which projects a clear white light that is slightly warmer.

## BENEFITS OF OUR LED LIGHTS

- IP68 Rating (Waterproof & Dustproof)
- Radio Frequency Interference Filter (RFI)
- Durable Poly Carbonate Lens
- Most lights will have a connector for Plug & Play applications
- Electromagnetic Interference Filter (EMI)
- Die-cast Aluminum Housing / Heat-Sink
- Stainless Steel Hardware
- Exact Fit, we do not use generic lights with will-fit brackets

The Mojave Series LED Racing Lights have been designed to survive and operate in extreme conditions. They feature heavy duty housing that withstand hard impacts, lens that are twice as thick as traditional lighting, and extreme lighting performance.

**Heavy Duty Design** – We have designed the Mojave Series to survive and operate in extreme conditions. The aluminum housing uses high quality material is thicker in higher wear areas (i.e. bezels & mounting points). The hardware/brackets are stainless steel and oversize then traditional comparable lights.

**Replaceable Lens** – Traditionally, when a customer buys a LED Light, it is a sealed unit. This means if the light goes bad, you must replace the whole unit. With replaceable lens, the customer can replace broken or cracked lens. Also, instead of having to try out a light for beam pattern, customer can change beam patterns to desired effect. This will also allow customers to update their light if a new lens design is released.

## LED Headlight Canbus Relay

\$27

Newer vehicles might require a Canbus Relay to be installed. Canbus Relays, also known as Warning Cancelers, prevent a "bulb out" indication that may occur on vehicles with complex on-board computers. These relays can be attached in-line between light and vehicles wiring harness. One relay per light bulb.

### TLCR13

\$27

If your vehicle has a bulb that uses a ground sensor to detect a "bulb out," then it will require our Canbus Relay that is negative controlled.
